Corporate Sustainability.

Enhesa's Corporate Sustainability solution provides jurisdiction-specific sustainability requirements and forecasts for companies' operations, products, and value chains across the three pillars of sustainability: environmental, social, and governance as well as a global public policy outlook.

Achieve ESG clarity while tracking global trends

The fast-evolving nature of ESG regulations demands constant monitoring, making infrequent updates and manual processes unsustainable. For global businesses, staying ahead requires a comprehensive view of sustainability programs and upcoming changes. Enhesa's Corporate Sustainability Solution streamlines this by curating jurisdiction-level regulations and long-range trends, saving companies 230+ hours per jurisdiction annually. This allows you to focus less on searching and organizing regulations, and more on assessing their business impact and effectively operationalizing the requirements.

Manage global ESG data efficiently:

- One central repository of relevant content in one place, 1 language, global, industry agnostic coverage organized by standard topic areas

- Covers 50+ jurisdictions and 100+ ESG topics for comprehensive global oversight

- Delivers actionable, useful intelligence, provided by in-house analysts made easy to understand for both experts and non-experts

Mitigate the risk of non-compliance:

- Ensure transparency with verifiable, investment-grade data to avoid compliance risks

- Streamline tracking across multiple jurisdictions to manage diverse regulatory requirements

- Prevent blind spots from fragmented data that can lead to penalties, operational losses, and reputational damage

Monitor sustainability related developments:

- Get a global policy-level view with summarized updates from 300+ different organizations influencing legislations and standards to come

- Receive notifications as new regulations or changes emerge on your tracked jurisdiction

- See future trends and evolving legislations before they launch

Corporate Sustainability.

One standard way of looking at your ESG requirements around the globe

Our legal experts identify applicable regulations and horizon scan upcoming ones, based on topics required by key sustainability reporting standards, organized by a standard taxonomy, to provide actionable, standardized requirements, ensuring comprehensive coverage and clarity for a robust sustainability strategy.
